

## **Manipulatives Everywhere**

For children to learn the abstract concepts that Math often presents; they require something tangible to help them develop understanding such as Math Manipulatives!

Children's brains learn at the concrete level during elementary school years, Manipulatives give them a concrete tool to show them how a concept works as opposed to just listening and memorizing, manipulatives help the students exploring new ideas and try out different solutions.

In this Session we shall learn how to use items readily available around us as Manipulatives to encourage both; students and the guardians to deepen Math understanding and help to unlocking Problem Solving.

Come prepared to be wowed.
